

Save money and optimize your phone system with flexible, scalable SIP Trunks.

Save up to 50% on telephony costs

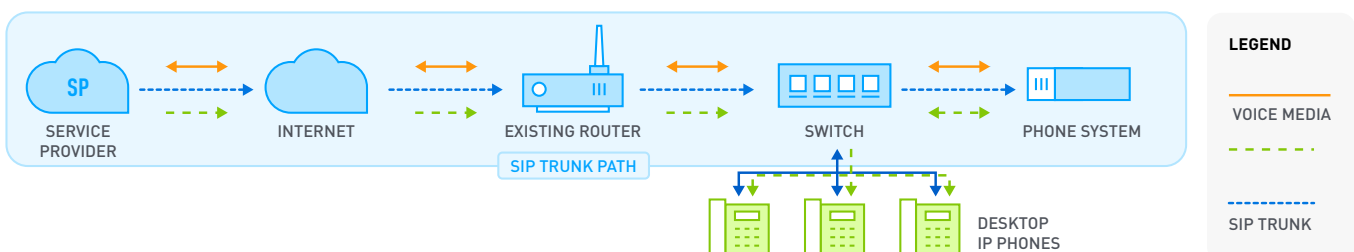

Ensures business continuity during local outages

Quick and effortless deployment and management

Enhanced reliability compared to traditional phone lines

MODERNIZE YOUR BUSINESS WITH SIP TRUNKS

SIP Trunking leverages the power of the Internet to offer seamless phone service for your existing phone systems. Unlike traditional phone lines, SIP Trunking establishes virtual connections, or “trunks”, between an organization’s phone system using your existing internet connection. This technology allows for the transmission of voice and data traffic over a single, efficient network, eliminating the need for costly traditional phone lines. By harnessing the power of SIP, businesses can save money and modernize their communication systems while embracing a flexible and scalable approach to stay ahead in today’s competitive landscape. Here is an example of how SIP Trunks work.

BUILD YOUR SIP TRUNKING SOLUTION

1. SELECT A FLEXIBLE CALLING PLAN

Unlimited plans offer a predictable flat rate fee for monthly phone service. All local and long distance minutes are included in a flat monthly rate. Unlimited plans are best for customers who make a lot of long distance calls.

Bundled plans offer a flat rate for unlimited local calling, a fixed number of long distance minutes, and an overage fee for exceeding the long distance plan. Bundled plans are best for customers who use more local calling and make fewer long distance calls.

INCLUDED FEATURES

Direct Inward Dial number

You'll receive an included phone number with every trunk.

E911 Service

E911 service automatically ties a location to the caller's phone number for 911 calls.

CNAM & Inbound Caller ID

The Caller ID Name (CNAM) and inbound Caller ID number will appear directly on your telephone LCD display.

2. ADD OPTIONAL FEATURES

Automated Attendant

Answers and routes inbound calls to a person, department or information. Provides a menu with custom greeting and menu options. Most often used for failover/business continuity. Local or toll-free number.

Follow Me w/Voicemail

Provides call forwarding, call screening, and sequential and simultaneous ringing. Ideal for mobile sales, support or executives. Local or toll-free number.

Remote Market Numbers

Establish a local presence in a market that might be across the city, state, or nation without the costs of a branch office set up, commuting or staffing.

Voicemail

Local or toll-free number with built-in voicemail. Ideal for businesses who do not have voicemail or would like to replace their voicemail with a hosted mailbox. Also used for business continuity to deliver special greetings, take messages and send them as a .wav file to an emergency response email distribution list.

WebFax

Receive and store faxes. Secure, confidential "fax mailbox" for receiving and sending faxes from a PC. Local or toll-free number.

Toll-free Number

Dedicated toll-free numbers for inbound calling.

COMPATIBLE WITH THE TOP PBX MANUFACTURERS
